### Question 1. (Single Select)

What is the default file to store the dispatcher cache configuration?

A: /etc/httpd/conf.dispatcher.d/cache/\_cache.xml

B: /etc/httpd/conf.dispatcher.d/cache/\_cache.any

C: /etc/httpd/conf.dispatcher.d/cache/\*\_cache.config

**Correct Answer: B**

### Question 2. (Multi Select)

A client wants to ensure that only specific components are available to content authors when using an editable template in AEM. Additionally, they require that certain fields within a content fragment model adhere to strict validation rules for data integrity.

Which two steps would the developer take to meet both requirements? (Choose two.)

A: Use editable templates to directly configure field validation rules.

B: Configure field validation within the content fragment model.

C: Create and assign a new workflow to enforce component usage.

D: Enable dynamic templates for flexible content creation.

E: Define policies in the editable template to control allowed components.

**Correct Answer: B, E**

### Question 3. (Single Select)

A developer is tasked with designing a solution to accommodate multiple client projects within a

single Adobe Experience Manager (AEM) instance, each requiring its own set of unique resources, code, and content.

Given the need for true multi-tenancy, where each tenant operates independently with zero knowledge of other tenants and no shared code, content, or common authors, which approach should the developer recommend?

A: Implement separate author and publish instances for each tenant, ensuring complete isolation of resources, code, and content, thereby achieving true multi-tenancy.

B: Encourage the use of component groups and allowedPaths properties to logically separate tenant-specific components and templates within the same AEM instance.

C: Utilize AEM's out-of-the-box multi-tenancy capabilities to segregate tenants within the same author and publish instances, relying on access control lists (ACLs) and content path organization to ensure separation.

**Correct Answer: A**

#### Question 4. (Single Select)

While configuring SSO with SAML 2.0 compatible IDP on AEM, a developer notices an infinite loop between the IDP and AEM when trying to log in to AEM using SSO.

Which dispatcher-specific configuration is required to prevent this scenario?

A: Config File: filters.any

B: Config File: allowed\_clients.any

C: Config File: vhosts.any

**Correct Answer: A**

#### Question 5. (Single Select)

A customer has the requirement to use SAML authentication on AEM using their SAML 2.0 compatible IDP.

Example:

AEM: [www.wknd.com/content/siteB/index.html](http://www.wknd.com/content/siteB/index.html)

IDP: <https://www.idpB.com>

How should an AEM Developer configure their SAML Authentication Handler?

A: `com.adobe.granite.auth.saml.SamlAuthenticationHandler.userIntermediatePath` : `/content/site`

B `com.adobe.granite.auth.saml.SamlAuthenticationHandler.assertionUrl` : `https://www.idpB.com`

B: `com.adobe.granite.auth.saml.SamlAuthenticationHandler.path` : `/content/siteB`

C: `com.adobe.granite.auth.saml.SamlAuthenticationHandler.userIntermediatePath` : `/content/siteB`

**Correct Answer: B**
