### Question 1. (Single Select)

You need to automate the deployment of software across hundreds of servers using Chef. To ensure the configuration can be reused across different environments (development, testing, production), you need to apply different configurations based on environment variables. Which Chef feature should you use to manage this?

- A: Nodes
- B: Cookbooks
- C: Environments
- D: Roles

**Answer: C**

### Question 2. (Multi Select)

What are primary features of message brokers like OpenStack Zaqr?

- A: Low data throughput
- B: Asynchronous message processing
- C: Limited to point-to-point messaging
- D: Decoupling of message producers and consumers

**Answer: B, D**

### Question 3. (Single Select)

A development team is working with Jenkins to automate their deployment pipeline. They want to run unit tests, integration tests, and deployment tasks sequentially. Which Jenkins feature should they use to model their pipeline?

- A: Freestyle Jobs
- B: Declarative Pipeline

- C: Credentials Plugin
- D: Docker Pipeline Plugin

**Answer: B**

#### Question 4. (Multi Select)

Which security issues exist for most publicly available Vagrant boxes?

(Choose three correct answers.)

- A: They accept SSH logins from the user vagrant with the password vagrant.
- B: They accept SSH logins from the user vagrant with a publicly available SSH key pair.
- C: The vagrant user can use sudo to obtain root privileges without additional authentication.
- D: Their whole file system, including configuration files, is writable by any user, including vagrant.
- E: They export their file system via NFS with full write permissions without any additional restrictions.

**Answer: A, B, C**

#### Question 5. (Single Select)

The file index.php was modified locally but not committed. Which Git command restores it to the last committed version in the current branch?

- A: git revert index.php
- B: git clean index.php
- C: git reset index.php
- D: git checkout -- index.php

**Answer: D**
