Question 1. (Single Select)

Universal Connect (UC) offers dedicated internet service to business customer. UC requires that when the first dedicated internet service is added then it automatically adds the customer premises Equipment (CPE). UC also has requirement to be able to use the same Ethernet access device for their future offerings like VOIP and business TV. How should consultant model have dedicated internet services and Ethernet across devices offers

- A: Model the Ethernet access device as a child product of the dedicated internet service offer
- B: Model dedicated internet service as a child product of the Ethernet access device offer.
- C: Model Ethernet access device and dedicated Ethernet service offers as two standalone offers with an auto add relationship that adds the Ethernet access device when a dedicated internet service is added.
- D: Model the Ethernet access device and dedicated internet service offers as two standalone offer with a recommends relationship that recommends the Ethernet access device when internet service is added

Correct Answer: C

Question 2. (Multi Select)

The discovery phase has identified the industries order management should integrate with the provisioning system using HTTP protocol, however to activate the service the external system requires two HTTP requests passing formatted JSON payloads. A temporary identifier is returned from the first request and must be used on the second one, but it has no relevance to CRM. The provisioning system is known to reply within 750ms for each request. What are two out of the box options for integration within this system?

- A: Design for one callout each request and cache the identifier in memory
- B: Design integration procedure that makes both request and returns the result to order Management.
- C: Use Data raptor technology to make the request and return the response to order management
- D: Design for one callout each request and save the identifier in a non-assetizable attribute on

the fulfillment request line

Correct Answer: C, D

Question 3. (Single Select)

United Telecom is moving its assets to communication cloud as part of its digital transformation. During the asset migration process, a consultant includes a step to create no change MACD order. Why this is necessary to have this step in migration process?

- A: To create inventory items to be used in subsequent MACD.
- B: To validate the migrated assets data aligns with assets data model
- C: To validate if decomposition works on migrated assets
- D: To validate if MACD works on migrated Assets.

Correct Answer: A

Question 4. (Single Select)

Has commercial attribute called “access Type” on the internet offers with two values, namely DSL and Fiber. UC has requirement to model routers as technical products and offer either a DSL or a fiber router based on the “access type” value. What kind of decomposition relationship should a consultant recommend to achieve this requirement?

- A: M:M
- B: M:1
- C: 1:M
- D: 1:1

Correct Answer: C

Question 5. (Multi Select)

The discovery phase has identified the industries order management should integrate with the provisioning system using HTTP protocol, however to activate the service the external system requires two HTTP requests passing formatted JSON payloads. A temporary identifier is returned from the first request and must be used on the second one, but it has no relevance to CRM. The provisioning system is known to reply within 750ms for each request. What are two out of the box options for integration within this system?

- A: Design for one callout each request and cache the identifier in memory
- B: Design integration procedure that makes both request and returns the result to order Management.
- C: Use Data raptor technology to make the request and return the response to order management
- D: Design for one callout each request and save the identifier in a non-assetizable attribute on the fulfillment request line

Correct Answer: C, D
