Devops Institute

SRE-Foundation Exam

Site Reliability Engineering Foundation

Exam Latest Version: 6.0

Question 1. (Single Select)

Which metric is commonly used to measure system availability?

- A: Mean Time Between Failures (MTBF)
- B: Deployment Frequency
- C: Change Failure Rate
- D: Code Complexity Score

Correct Answer: A

Question 2. (Multi Select)

How does automation contribute to anti-fragility? (Select two)

- A: Automating incident response reduces recovery time
- B: Continuous monitoring helps detect anomalies early
- C: Automation replaces the need for incident management
- D: Systems become completely immune to failures

Correct Answer: A, B

Question 3. (Single Select)

In incident management, a _____ postmortem ensures that teams focus on learning from failures rather than assigning blame.

- A: Blameless

- B: Reactive
- C: Punitive
- D: Manual

Correct Answer: A

Question 4. (Single Select)

What is the difference between proactive and reactive monitoring?

- A: Proactive monitoring detects potential issues before they impact users, while reactive monitoring identifies problems after they occur
- B: Reactive monitoring eliminates the need for logging and observability
- C: Proactive monitoring only applies to cloud environments, while reactive monitoring is for on-premises systems
- D: Reactive monitoring replaces error budgets in service reliability tracking

Correct Answer: A

Question 5. (Multi Select)

What benefits do chaos engineering experiments provide? (Select two)

- A: Identifying weaknesses in system reliability before they cause failures
- B: Helping teams design more resilient and adaptable systems
- C: Ensuring systems never experience failures
- D: Replacing the need for observability tools

Correct Answer: A, B
