

QUESTION 1: What is the purpose of the following code?

```
def my_function(x):  
    return x + 1  
  
my_function(5)
```

Answer:

The code defines a function named `my_function` that takes a parameter `x` and returns `x + 1`. It then calls the function with the argument `5`.

Correct

QUESTION 2: What is the output of the following code?

```
def my_function(x):  
    return x + 1  
  
my_function(5)
```

Answer:

The code defines a function named `my_function` that takes a parameter `x` and returns `x + 1`. It then calls the function with the argument `5`. The output of the code is `6`.

Correct

QUESTION 3: What is the output of the following code?

```
def my_function(x):  
    return x + 1  
  
my_function(5)
```

The code defines a function named `my_function` that takes a parameter `x` and returns `x + 1`. It then calls the function with the argument `5`. The output of the code is `6`.

Correct

QUESTION 4: What is the output of the following code?
