Question 1. (Single Select)

Universal Containers has several concurrent projects building new functionality, fixing bugs, and modifying existing functionality. Management would like features to be available to users as quickly as possible, even if the entire project is incomplete. What should an Architect recommend to maintain quality?

- A: Require developers to deploy completed code and unit tests directly to production
- B: Deploy all functionality together to ensure all functionality works together without error
- C: Use a spreadsheet to track approved changes that should be released with change sets
- D: Utilize automated source control, test, and build systems to test and deploy to production

Correct Answer: D

Question 2. (Multi Select)

Which two environments are appropriate for creating a managed package? Choose 2 answers

- A: Developer Pro Sandbox Org
- B: Partner Developer Edition Org
- C: Production Org with LMA
- D: Developer Edition Org

Correct Answer: B, D

Question 3. (Multi Select)

Which two project situations favor an Agile methodology? Choose 2 answers

A: A digitization project to update an existing customer -facing process and enable quick adjustments

B: A project to be executed by a third party, with a fixed and formal scope, budget, and timeline

C: An environment with a heavy investment in DevOps capabilities for rapid testing and deployment

D: A project with well-defined requirements and complex interactions between front- and back-end systems

Correct Answer: A, C

Question 4. (Multi Select)

Universal Containers has just initiated a project to implement a custom container tracking application with a large development team. The project manager is concerned that the large number of developers in a single developer pro sandbox could lead to challenges with code being overwritten. Which two methods should be used to mitigate this risk? Choose 2 answers

A: Provide each developer their own sandbox developer org and implement a code repository and continuous integration to merge code into the developer pro sandbox

B: Replace the developer pro sandbox with a Partial copy sandbox

C: Use a single sandbox and strictly coordinate development across shared components, and implement a code repository to allow developers to merge code into a common repository

D: Provide each developer their own sandbox developer org, and implement managed packages to deploy to the merge

Correct Answer: A, C

Question 5. (Single Select)

As a part of technical debt cleanup project, a large list of metadata components has been identified by the business analysts at Universal Containers for removal from the Salesforce org. How should an Architect manage these deletions across sandbox environments and production

with minimal impact on other work streams?

A: Generate a destructivechanges.xml file and deploy the package via the Force.com Migration Tool

B: Perform deletes manually in a sandbox and then deploy a Change Set to production

C: Assign business analysts to perform the deletes and split up the work between them

D: Delete the components in production and then refresh all sandboxes to receive the changes

Correct Answer: A
