Odoo 19 Certified Functional Consultant Certification Exam

Exam Latest Version: 6.0

Question 1. (Single Select)

How would you set up a mechanism where the amount of time off an employee gets depends on his/her number of days worked?

- A: You create a new Time Off type with the allocation mode set to 'Fixed by HR'
- B: You create a new Time Off type that does not permit Extra Day Requests
- C: You create a new Allocation and set the Allocation Type to 'Accrual Allocation'

Correct Answer: C

Explanation:

Creating a new Allocation and setting the Allocation Type to 'Accrual Allocation' allows for the accumulation of time off based on the employee's number of days worked. This choice enables the mechanism where the amount of time off an employee gets depends on their work duration, making it the correct option for the given scenario.

Question 2. (Single Select)

You have 10 units on hand of the product below, and 5 forecasted units. If you run the following reordering rule, how many units will be ordered?

The screenshot shows the Odoo Product Form for 'Corner Desk Left Sit'. The 'Replenish' tab is active, displaying a reordering rule with a minimum stock of 30.00 and a maximum stock of 40.00. The current stock is 10.00 units on hand and 5.00 units forecasted. The reordering rule is highlighted with a red box.

Field	Value
On Hand	10.00 Units
Forecasted	5.00 Units
In	0
Out	0
Min	30.00
Max	40.00

- A: 30
- B: 35

C: 10

Correct Answer: B

Explanation:

This choice is correct because the reordering rule takes into account the current stock level (10 units) and the forecasted units (5 units), resulting in a total of 35 units to be ordered to meet the demand.

Question 3. (Single Select)

Can you create alternative requests for quotation (RFQs) for multiple vendors, with the same products, to find the best price?

A: No, Odoo does not allow for alternative requests for quotation to be created with the same products and different vendors

B: Yes, by clicking 'Create Alternative' under the 'Alternatives' tab from a new RFQ, and selecting 'Copy Products'

C: Yes, by selecting two RFQs from the RFQs overview page, clicking the 'gear' icon, and clicking 'create alternative quotation'

Correct Answer: B

Explanation:

By clicking 'Create Alternative' under the 'Alternatives' tab from a new RFQ and selecting 'Copy Products', you can easily create alternative requests for quotation (RFQs) for multiple vendors with the same products. This feature allows you to compare prices and choose the best offer among different vendors.

Question 4. (Single Select)

I want to move all items that should be picked in WH/Stock/Shelf1 for internal transfer. What should I do?

- A: A cluster picking
- B: A batch picking
- C: A wave picking

Correct Answer: B

Explanation:

A batch picking is the correct choice for moving all items that should be picked in WH/Stock/Shelf1 for internal transfer. Batch picking involves picking multiple orders at once in a single trip through the warehouse, which is efficient for moving items to a specific location like Shelf1 for internal transfer.

Question 5. (Single Select)

Where do you set up stock valuation accounts?

- A: On the product and product category level
- B: Only on the product level
- C: Only on the product category level

Correct Answer: C

Explanation:

Setting up stock valuation accounts only on the product category level allows for a more organized and efficient way to manage accounts for multiple products that belong to the same category. This approach ensures consistency and simplifies the process of assigning valuation accounts to products within the same category.
