Expert assistance anytime

### Question 1. (Multi Select)

Which two approaches best support severity-based notification routing?

(Choose two.)

- A: Page on-call for every incident to ensure coverage
- B: Disable email alerts to reduce noise without tuning
- C: Create separate notification policies for critical vs medium/low severity
- D: Add policy conditions based on incident severity/state

**Answer: C, D**

### Question 2. (Single Select)

An analyst wants to find systems running a specific software version and then pivot to related events.

Which analytics capability supports that pivot best?

- A: CMDB query combined with event search filtering
- B: HA heartbeat election
- C: Remediation playbook execution
- D: Notification policy escalation only

**Answer: A**

### Question 3. (Multi Select)

Which two outcomes are typical reasons to use aggregation in a rule?

(Choose two.)

- A: Require a threshold (N events) before triggering an incident
- B: Encrypt search results automatically
- C: Reduce noise by correlating repeated activity within a time window

D: Disable CMDB enrichment for matched events

**Answer: A, C**

#### Question 4. (Single Select)

When building multi-step investigations, what is the primary advantage of using nested lookups over manual copy/paste of values?

- A: It guarantees the query will never return false positives
- B: It makes correlation repeatable and less error-prone across searches
- C: It automatically blocks matched entities
- D: It converts the investigation into a playbook without configuration

**Answer: B**

#### Question 5. (Multi Select)

Which two tasks align directly with the FortiEDR security settings and policies objectives listed for this exam?

(Choose two.)

- A: Configure FortiSIEM CMDB database replication
- B: Configure communication control policy
- C: Configure FortiWeb reverse proxy certificates
- D: Configure playbooks

**Answer: B, D**
